

Should I migrate to Windows Server 2003 ? ...

Migration

There are so many reasons why you should consider migrating to Windows Server 2003.

Some of the key benefits are:

- It's easy to deploy, manage and use. With its familiar Windows interface and new, streamlined wizards, installation and day-to-day management are faster and more convenient.
- It's secure. Extend your IT investment to partners, customers and suppliers with Active Directory, .NET passport and PKI technologies.
- Enhanced reliability, availability, scalability and performance thanks to such features as memory mirroring and IIS, support for eight-node clusters and up to 64-way Itanium 2 systems.
- TCO is lower. Technical advances and innovations help reduce your total cost of ownership through better management of your existing IT investment.

..... Do you want to - Increase Speed, productivity, be more secure and reduce cost of ownership?

If you answered YES to the above then you should consider the benefits of migrating to the latest version of Windows Server.

Work smarter, focus your attention on more business critical issues..... Let Comcen Professional services handle your Migration needs....
